Technical, Marketing and Designing Department details

Technical Department :

Osiz Technologies Private Ltd

No.22, Astalakshmi Nagar,
Thanakankullam,
(Opp Seetha lakshmi Mill gate Bus stop)
Thirunagar, Madurai, 625 006.

Marketing Department :

Hyderabad Talkies

Flat No-505, Megna Lakeview,
Kondapur, Beside Cyber Convention,
Hyderabad, Telangana 500084

Designing Department :

CS Designing Solutions

Secunderabad.

Technical Features

1. **This Document uses the following convention:**

- a) **BSC** - Binance Smart Chain
- b) **DB** - Database
- c) **ABCDDeFi** - The Symbol of the token which we create using BSC
- d) **Maxcap** - It is the Maximum level of token that are created.
- e) **ABCD** - The Name of the token which is created
- f) **Decimal** - 18

2. **Smart Contracts based on distributed ledger technology (DLT or blockchain).**

Smart contracts are computer protocols that automatize value-exchange transactions between the entrepreneur and investors, potentially creating perfect disintermediation.

3. **ABCD Token is a BEP 20 Token which runs on Binance Smart Chain platform.**

4. **ABCD Token can be purchased with:**

- a) **BTC** - A Crypto currency used to purchase the ABCD Token
- b) **ETH** - A Crypto currency used to purchase the ABCD Token
- c) **BNB** - A Crypto currency used to purchase the ABCD Token

WHY ABCDeFi ?

A never before, one of its kind of a quest, what makes ABCDeFi truly path breaking & efficacious in achieving "Financial Inclusion of All" and "Financial Excellence of all" is the ultimate amalgamation of the CeFi & DeFi worlds in the most practical, real and ideal manner; by way of Democratized Decentralization and Preemptive Centralization of Finance.

ABCDeFi grandly introduces to the world "Democratized Decentralization & Preemptive Centralization", the one single phrase that explicitly explains the entirety of ABCDeFi. It is the most inclusive, excellent and efficient method of Centralized Decentralized Finance, truly achieving Financial inclusion and excellence of all by not only depending on Automated Technology and methods of DeFi or Central Authority of CeFi but also by truly achieving decentralization by democratically including one and all and protecting the ecosystem preemptively in a centralized way from unexpected and unforeseen contingencies like volatility, uncertainty etc.

DEMOCRATIZED DECENTRALIZATION & PREEMPTIVE CENTRALIZATION :-

THE TRUE ESSENCE OF CeDeFi accomplished by ABCDeFi:-

ABCDeFi achieves Democratized Decentralization by way of :-

- Automated Loan Mechanism blended with loan choosing, giving the liberty to the lender to choose the borrower and the loan. This avoids governance, decision making, preference, 3rd party dependence etc by one or a group of individuals.
- Lender earning and benefiting also leading to Community incentive and Community benefit on each loan successfully lent, achieving the benefit of "ALL THROUGH ONE", truly benefitting one and all.
- Decentralizing primary insurance as well and

avoiding primary dependency on a 3rd party for insurance.

- Achieving Financial Excellence and Effectiveness by way of adopting the most accepted, agreed, unanimous, optimized and chosen solutions put forward by one and all through techniques of Swarm Intelligence Learning and other effective methods.
- "FINANCIAL EDUCATION" spread effectively one and all, a very important factor to achieve Financial Inclusion.
- Automated NFT-fying of every aspect of actions on the platform to the benefit of everyone involved.
- NFT Barter with complete freedom of exchange between giver and receiver.
- "GYFT" the concept progressively involving one and all financially in a professional manner and helping one and all to improve and engage financially through each other.

ABCDeFi protects the ecosystem through Preemptive Centralization by way of :-

- Fixed Interest Rates without dependency on market performance or demand or supply etc keeping in view that the expectation of benefits of the lender and borrower from the platform to be 100% in sync with the reality financially.
- Fixed Collateral LTV ratio to not only simplify but also standardize the loan process.
- Community incentive and community benefit on each loan successfully lent to achieve the benefit of one and all. This also acts like a preemptive insurance of a sort or a preemptive relief to the token holders, lenders, investors etc in case of any unexpected and unforeseen contingencies like volatility, uncertainty etc. In all good times otherwise, the community incentive is a profit to the whole community distributed to all individuals to the extent of tokens held by each, which is to be kept completely to themselves and enjoyed, spent, reinvested, deemed as a compensation for future unexpected or unforeseen contingencies etc they own this profit.

Absolute Blend of Centralized and Decentralized Finance Finance Redefined...

WHY ABCDeFi?

Margin Call and Loan Recourse facilities, keeping in mind the ultimate welfare of the Lender and his wellbeing.

NFT-ifying every aspect of the platform to act as an additional income and goodwill generating feature, an otherwise profitable initiative helping as a reserve/deemed as a compensation for one and all for future unexpected or unforeseen contingencies like volatility, uncertainty etc. It is fully owned, deemed and held by the individual, entity, holder etc. as an asset of value which is earned and can be enjoyed, spent, reinvested and most importantly deemed as a compensation for future unexpected or unforeseen contingencies etc.

NFT-ifying- A complete solution to achieve accuracy and trust and avoid Defaults :- Every financial action and activity undertaken by a person is recorded in the NFT, value of which directly depends on the financial performance of the person, thus greatly acting as a moral financial policing tool encouraging and rewarding good ethical practices, sincerity, honesty, efficiency, accuracy, willingness to pay, responsibility for one's financial actions, building trust even in the highly uncertain times etc.

Certification, Creditworthiness, Goodwill etc all assessed through the NFT

The Symbiosis of the above mentioned Democratized Decentralization and Preemptive Centralization are achieved by way of:-

1) THE LENDING AND BORROWING MECHANISM
"eLIC" (earnings for Lender & incentive for community):-
eLIC Loan Mechanism if the loan is a CRYPTO Loan

NOW LET US ASSUME:- Let us assume the symbol for the platform ABCDeFi Token is "ABCD"

2) IF THE LOAN TAKEN BY THE BORROWER IS A CRYPTO LOAN:-

The LENDER puts up (Locks-in) his Fiat/Crypto (the top cryptos only)/Stable Coin/NFT/Digital Assets of say 100 USD \$ worth for lending for a period of 1 yr. This above money is locked for the period of 1 yr and the lender is given exact worth of 100\$ in ABCD Tokens which are to be

Absolute Blend of Centralized and Decentralized Finance Finance Redefined..

- Tokens into "X Peat NFT", enriching the mechanism yield. Note :- Compositing results in X Peat ABCDeFi NFT, X Peat Lender NFT & X Peat Borrower NFT. each's value being 1% of Principal + Interest Amount ; all handed over once the loan is initiated.
- b) The remaining ABCD tokens are transferred to the reserve which can be used by the platform to lend, borrow, invest, generate income etc and also act as a reserve for unforeseen contingencies of activities, markets etc or of the development of the platform and its activities.

D)

- a) Now the borrower has 100 \$ worth ABCD Tokens in hand as a loan for example for 1 yr and the interest per annum say for example is 11% pa, he has to pay back in monthly installments by way of Principal + Interest divided into 12 equal installments each to be paid every month ie. 100\$ worth ABCD Tokens + 11%/12 monthly installments = 9.25 USD \$ worth ABCD Tokens per month for 1 year.

b)

In the above scenario, The lender earns and receives an interest of 0.82% (approx) per month of \$ worth of amount lent, in the form of the ABCD Tokens worth the 0.82% in USD\$, for 12 months and once the 12 months are completed, the whole locked in Crypto/Fiat/Stable coin/NFT/Digital Assets is given back to them. Thus the interest paid to the lender every month is always in the form of ABCD Tokens.

Once the Borrower honors his complete loan and pays the 12 installments, he gets back his collateral amount.

Monthly installment payment by the borrower is always in ABCD Tokens if it is a Crypto loan

(installment \$ worth given in ABCD Tokens).

E)

a) Once the loan is Completed, Honored and Executed, 3 NFTs are automatically formed as the X Loan. The 3 NFTs are :-

i) Lender X Loan NFT :- Certifying complete history, data and every minute detail and statistics and other vital information of the loan is put into the NFT from the Lender point of view.

ii) Borrower X Loan NFT :- Certifying complete history, data and every minute detail and statistics and other vital information of the loan is put into the NFT from the Borrower point of view.

iii) Platform X Loan NFT :- Certifying complete history, data and every minute detail and statistics and other vital information of the loan is put into the NFT from the Lender, Borrower and Platform point of view.

These NFTs are not only a proof of the successful execution of the loan from all 3 sides, but also certification, audit, accounting, detailed data written inside the NFT for everyone to study, scrutinize etc as well as a goodwill, recognition efficiency report, merit report etc and is a crypt asset which can be tradable, collateralize elsewhere and to anyone etc. Each of the above 3 NFTs initial value shall be of 1% of the total loan amount (principal + interest) in \$ Worth.

Loan Mechanism if the loan is a FIAT Loan

Assume the symbol for the platform ABCDeFi Token is "ABCD"

Assume Loan value is 100 USD \$

and Value of 1 ABCD Token is 1 USD \$

1 X Token = 0.9 ABCD Token
Thus approx 112 X Tokens = 100 ABCD Tokens

Lender Entrusts ABCD tokens to ABCDeFi to be Lent

- Locks-in Pledged Collateral of Borrower
- Burns 12 X Tokens to make 1 X Token = 1 ABCD Token
- adds value of 12 X burnt tokens to all ABCD Tokens of Platform

- exchanges 100\$ worth ABCD Tokens for 100\$ FIAT from its ICO Fund Allocation's "Liquidity for Financial Activities/Reserve"
- Lends the 100\$ FIAT to Borrower upon Borrower paying 2% Origination Fee
- transfers remaining ABCD tokens to the Reserve
- Composites the remaining X Tokens into X Peat ABCDeFi NFT, X Peat Lender NFT and X Peat Borrower NFT, enriching the mechanism yield

Borrower pays back the Loan+Interest Amount in equal monthly installments by way of principal in FIAT and Interest in ABCD Tokens each month

Lender X Loan NFT, Borrower X Loan NFT and ABCDeFi X Loan NFT automatically created once loan is completely honoured and repaid

IF THE LOAN TAKEN BY BORROWER IS A FIAT LOAN:-

The LENDER puts up his Fiat/Crypto (the top cryptos only)/Stable Coin/NFT/Digital Assets of say 100 USD \$ worth for lending for a period of 1 yr. This above money is locked for the period of 1 yr and the lender is given exact worth of 100\$ in ABCD Tokens which are to be now used within 24 hrs to lend.

Absolute Blend of Centralized and Decentralized Finance Finance Redefined..

NOTE :- A small negligible fee is charged to give these ABCD Tokens for the lock-in done. If loan disbursement process starts within 24 hrs then this fee is refunded. If within 24hrs loan disbursement process is not started then the coins are taken back and the lock-in crypto is released and given back, no refund of the fee.

- b) Now the lender goes onto the "LOAN PORTFOLIO/LISTED PLATFORM" on the ABCDeFi platform where various borrowers have listed their loans upon filling in all the details and requirements of the loan required and passing all measures, KYC & AML compliance completed, all related data and documents furnished, a complete presentation of the required loan put up beside it. Details of the Crypto/Digital Assets to be put up as collateral mentioned etc done and thus finally the loan is listed and seen on the ABOVE PLATFORM. Once all the details are put up, the loan is converted into tokens specific to the loan. Let's say the loan is named X, so the tokens are X loan's tokens i.e. X tokens.

- c) The Lender sees a whole neatly arranged list of loans that have been listed here and chooses the borrower and his loan to lend the money. Here let's say the Lender chooses X loan, gets to study in detail of the borrower, his purpose of the loan, his documents etc and also check out the collateral. He studies all loans similarly and chooses the best he wants to lend, which say happens to be X loan.
- Thus this above process avoids voting, governance, approval of loans by a set of individuals or a centralized group or any other 3rd party etc. The Lender is free to choose as to whom he wants to give the loan to.

- B) The X loan Token's, as a matter of fact... any a) loan's token, value is by default always 90% (if

for upto 1 yr or within, 80% if for above 1 yr and upto 2 yrs and so on) of the "ABCD" Token's value as of that day and that time's value.

Thus 1 X token = 0.90 ABCD Token.

112 X Tokens = 100 ABCD Token (approx)

So if the loan value is of 100 USD \$ and ABCD Token Value as of that day and time is 1 \$ each, so 100 ABCD Tokens = 112 X Tokens.

- b) Now the Lender decides to lend his money for a loan so he gives the 100 ABCD Tokens to the platform to be lent to X loan borrower.

- c) Now the platform starts the process of the loan mechanism where, i) 12 X tokens out of 112 X Tokens are burnt, NOW making the value of 1 X Token = 1 ABCD Token. Thus remaining 100 X Tokens now = 100 ABCD Tokens = 100 USD \$.

Now the platform prepares to swap the 100 X tokens with ABCD Tokens by the process of:- a) first taking into the mechanism the 100 X Tokens (Note, the X loan tokens are on the platform only and are not in the possession of the Borrower at any given time), b) then generating the new value of the ABCD Tokens by adding value of the burnt 12 X tokens which is 12 X Tokens * 0.9 USD \$ = 10.8 USD \$, added to the total quadrillion ABCD Tokens collective value and coming up with a new ABCD Token value, c) finally lending 100\$ Fiat to the borrower, and then composting the X Tokens into "X Peat NFT", enriching the mechanism yield. Note :- Composting results in X Peat ABCDeFi NFT, X Peat Lender NFT & X Peat Borrower NFT, each's value being 1% of Principal+Interest Amount, all handed over once the loan is initiated."

NOTE :- The 100 \$ Worth ABCD Tokens are exchanged with the platform's ICO Fund

Absolute Blend of Centralized and Decentralized Finance

Finance Redefined..

allocated for Liquidity for Financial
Yr and interest/reserve to avail the 100\$ Fiat which is
tokens's as loan.

remaining ABCD Tokens are transferred to
reserve which can be used by the platform to
invest, generate income etc and
act as a reserve for unforeseen
emergencies of activities, markets etc or of the
development of the platform and its activities.

for X the borrower, for his loan to be released
and availed has to pay :-

2% Origination Fee in the form of the
ABCD Tokens to the platform and release the

loan part.

12 X Now he has 100 \$ as a loan and the
if 1 X interest per annum say for example is 9.75% pa
00 X which he has to pay by way of Principal +
\$. interest divided into 12 equal installments ie.
00 X 100\$ + 9.75% /12 monthly installments = 8.34
:- a) USD \$ + 0.82% of 100 \$ worth in ABCD Tokens
10 X per month for 1 year.

in the above scenario, The lender earns and
the receives an interest of 0.82% (approx) per
month of \$ worth of amount lent, in the form of
the ABCD Tokens worth the 0.82% in USD\$, for
12 months and once the 12 months are
completed, the whole locked in
Crypto/Fiat/Stable coin/NFT/Digital Assets is
given back to them. Thus the interest paid to the
lender every month is always in the form of
ABCD Tokens.

Once the Borrower honors his complete loan
and pays the 12 installments, he gets back his
collateral amount.

d) Monthly installment payment by the borrower
for Fiat loan is in the form of :- principal
amount's monthly installment in Fiat + monthly
interest in ABCD Tokens.

E) Once the loan is Completed, Honored and
Executed, 3 NFTs are automatically formed of
the X Loan. The 3 NFTs are :-

- Lender X Loan NFT :- Certifying,
complete history, data and every minute details
and statistics and other vital information of the
loan is put into the NFT from the Lender point of
view.
- Borrower X Loan NFT :- Certifying,
complete history, data and every minute details
and statistics and other vital information of the
loan is put into the NFT from the Borrower point
of view.
- Platform X Loan NFT :- Certifying,
complete history, data and every minute details
and statistics and other vital information of the
loan is put into the NFT from the Lender,
Borrower and Platform point of view.

These NFTs are not only a proof of the successful
execution of the loan from all 3 sides, but also a
certification, audit, accounting, detailed data
written inside the NFT for everyone to study,
scrutinize etc as well as a goodwill, recognition,
efficiency report, merit report etc and is a crypto
asset which can be tradable, collateralized
elsewhere and to anyone etc. Each of the above
3 NFTs initial value shall be of 1% of the total
loan amount (principal + interest) in \$ Worth.

IMPORTANT TO NOTE:-

A) The Lender :-

- a) The Lender locks his money with the platform and receives exact value of ABCD Tokens for lending. The locked in money is released and given back as it is once the loan is honored.
- b) Interest is always paid in platform ABCD Tokens.
- c) Lender Fees :-
 - 1) Fiat to ABCD Token conversion and vice versa 0.1%. This 0.1% to be paid additionally and separately than the investible/lendable amount.
 - 2) Crypto to Crypto conversions are free.
- d) For loan with "FIAT money lock-in", 1% Origination Fee of loan value is charged. Only after paying the 1% will the platform give the ABCD Tokens for starting the loan process.

B) The Borrower :-

- a) The Borrower Locks in his Collateral till the loan is honored. He gets to borrow a maximum amount of only 50% worth of his collateral i.e 1:2 ratio of Loan to Value Ratio (Check out the LTV Chart to know the LTV eligibility). Once the loan is honored the collateral is released and given back as it is.

b)

- 1) Installments are always to be paid back in ABCD Tokens only if the loan is a crypto loan.
- 2) Installments to be paid back in the same FIAT money if the loan is a Fiat Loan (Principal worth installment is paid in FIAT whereas the interest is paid in ABCD Tokens).

Note: Crypto Loans are always given in ABCD Tokens and FIAT Loans are always given in the respective FIAT.

If the value of the collateral considerably decreases, a crypto margin call might occur. Crypto Margin calls are calculated based on the

LTV (loan to value) rate outlined in your loan agreement. A margin call can happen when the value of your collateral drops, increasing the LTV of your loan.

In the event of a margin call, you will have to add more collateral to your account to maintain a healthy LTV ratio. The first margin call occurs at a 70% LTV. At this point, you have 72 hours to take action by posting additional collateral or paying down the loan balance. We will keep you informed if your LTV starts to near the 70% mark so you can take action preemptively. If your LTV reaches the 80% mark, ABCDeFi will automatically sell a portion of your crypto collateral to bring your LTV back to a 70% LTV.

d) Borrower Fees :-

- 1) Fees for Advertising and promotion of Loan is 0.5% of loan value.
- 2) Loan Listing fees per day on the Loan Listing Page/Platform is 0.01% of the loan value.
- 3) If a FIAT Loan, 2% Origination fee is charged.

C) The Token Buyer :-

a) Token Buyers fees :-

- 1) Fiat to ABCD Tokens = 0.1% of total Tokens bought... to be paid in USD \$
- 2) ABCD Tokens to Fiat conversion = 0.1% of total Tokens converted... to be paid in USD \$
- 3) Crypto to Crypto = Purchase as well as conversions are free.
- 4) NFT Buying and Selling :- 0.1% ~~of the~~ NFT Value.

D)

The platform earned interest, origination fee and other fees and charges earned are the earning of the Founder as he is the owner of the platform and are thus given to the Founder. The founder can either use this as a profit or further invest it on his behalf into the platform.

Absolute Blend of Centralized and Decentralized Finance Finance Redefined..

LENDING and BORROWING RATE:-

LENDING RATE if value locked in is :- The APY earned by the lender (interest earned by the lender) for the following value willing to be locked in :-

FIAT (USD \$, EUROS, GB Pound), USDC, Tether, Binance USD, TrueUSD, DAI		10.35%
Bitcoin (upto 2.5 BTC)		6.05%
Bitcoin (More than 2.5 BTC)		3.05%
Ethereum, Bitcoin Cash, Litecoin, Ripple, Chainlink, Wrapped BTC, Paxos Gold		5.3%
Paxos Standard		8.7%
Monero, NFT		3.05%
Government Approved Digital Asset (GADA) (Not Stock, Shares or any other such Assets)		10.35%

Borrowing RATE if Collateral is :- ie the interest paid by the Borrower for the following value willing to lock in as collateral:-

LOAN-TO-VALUE	INTEREST RATE	ORIGINATION FEE
50%	9.75%	2%
35%	7.9%	2%
20%	4.5%	2%

Loan rates and fees if Loan is taken in Fiat against Crypto

Loan Disbursal Based on Collateral pledged :-

ie. LTV

Loan Disbursal if Collateral is :-

a) FIAT (USD \$, EUROS, GB Pound), USDC, Tether, Binance USD, TrueUSD, DAI, Paxos Standard, GADA		50% LTV
b) Bitcoin (upto 2.5 BTC), Ethereum, Bitcoin Cash, Litecoin, Ripple, Chainlink, Wrapped BTC, Paxos Gold		35% LTV
c) Bitcoin (More than 2.5 BTC), Monero, NFT		20% LTV

Note :-

- 1) Only upon paying the Origination Fee does the loan get released.
- 2) Origination Fee and Interest to be always paid in ABCD Tokens.
- 3) Principal amount's monthly installments to be paid back in respective FIAT while monthly interest is paid in ABCD Tokens, if the loan is taken in FIAT. If loan taken in ABCD Tokens then to be paid in ABCD Tokens (To note that Crypto loan is always and only given in ABCD Tokens so Installment and interest for Crypto Loan to be paid in ABCD Tokens only).

ii) Loan Rates if Loan Taken in ABCD Tokens against Crypto:-

LTV	Interest Rate
50%	11%
35%	9.25%
20%	6%

Loan Disbursal Based on Collateral pledged :- ie. LTV Loan Disbursal if Collateral is :-

a)	FIAT (USD \$, EUROS, GB Pound), USDC, Tether, Binance USD, TrueUSD, DAI, Paxos Standard, GADA	50% LTV
b)	Bitcoin (upto 2.5 BTC), Ethereum, Bitcoin Cash, Litecoin, Ripple, Chainlink, Wrapped BTC, Paxos Gold	35% LTV
c)	Bitcoin (More than 2.5 BTC), Monero, NFT	20% LTV

Note:-

- 1) No Origination fee for Loans taken in ABCD Tokens against Crypto Collateral.
- 2) Monthly Installments and interest to be paid in ABCD Tokens only.
- 3) Interest paid to lenders is in ABCD Tokens only.

F) Crypto Margin Call:-

If the value of the collateral considerably decreases, a crypto margin call might occur. Crypto Margin calls are calculated based on the LTV (loan to value) rate outlined in your loan agreement. A margin call can happen when the value of your collateral drops, increasing the LTV of your loan.

In the event of a margin call, you will have to add more collateral to your account to maintain a healthy LTV ratio. The first margin call occurs at a 70% LTV. At this point, you have 72 hours to take action by posting additional collateral or paying

down the loan balance. We will keep you informed if your LTV starts to near the 70% mark, so you can take action preemptively. If your LTV reaches the 80% mark, ABCDeFi will automatically sell a portion of your crypto collateral to bring your LTV back to a 70% LTV.

- g) In case of nonpayment of an installment, the mechanism/smart contract automatically deducts the amount from the collateral and makes payment for the installment.

H) Recourse Loan :-

A "recourse loan" refers to a type of loan that assists a lender in recouping their investment. Specifically, if a borrower doesn't pay and the underlying asset's value does not cover it, the best way to describe a recourse loan is it's a form of secured financing. It allows the lender to pursue the debtor's other assets that were not used as loan collateral. Alternatively, the lender can take legal action in the event of a default in order to fully pay off the debt.

They provide lenders with substantial power due to having fewer limits on what lenders can pursue for loan repayment. A recourse loan actually permits the lender to seize the collateral and any of the debtor's other assets. Moreover, the lender has the option to take legal action against the borrower.

- I) Additionally, the platform to have all the DeFi features, functions, use cases and any other latest developments in terms of software, functions, use cases etc which are latest trending in the CeFi, DeFi, CeDeFi and Crypto MarketSpace.

- J) For all payments of interest, installments etc, the platform intends to help get the best ABCD

Absolute Blend of Centralized and Decentralized Finance Finance Redefined..

keep price by recommending to buy from certain holders of ABCD Tokens. This is an option put up to help the payers get quick access to the cheapest quoted ABCD Tokens and not a compulsory activity.

ABCD eFi REFERRAL PROGRAM :-

a) If Successful Lenders, Lenders with ongoing lending, Banking Professionals, financial Institutions Individuals or any individuals refer ABCDeFi platform to others for lending and if the latter successfully lends on ABCDeFi, the former gets a 0.05% monthly interest on the amount lent by the latter up to either the whole period of the loan or maximum up to 1 year, whichever is less. Additionally the former also receives and NFT which is 0.5% of the value of the amount lent by the latter.

b) If Successful Borrowers and Borrowers with ongoing borrowing, Banking Professionals, financial Institutions Individuals or any individuals refer ABCDeFi platform to others for borrowing and the latter successfully borrows on ABCDeFi, the former gets a 0.05% monthly interest on the amount borrowed by the latter up to either the whole period of the loan or maximum up to 1 year, whichever is less. Additionally the former also receives and NFT which is 0.5% of the value of the amount borrowed by the latter.

Note:- The above referral earnings are given in the form of ABCD Tokens only.

- 1) If any defaults in the payment of interest, then the referral earnings from then on for that loan is stopped/cancelled and there will be No NFT allocated Tokens.
- 2) The referral earnings can be through unlimited individuals. No limit on the number of referrals.
- 3) The referral earnings are paid by the platform from the Marketing, Promotion and Bonus allocated Tokens.
- 4) The referral earnings are given in one go either at the completion of the loan or after the completion of the period of one year, whichever is less.
- 5) A borrower can refer a lender and vice versa and the former gets the prescribed monthly referral interest and NFT as well.
- 6) The whole referral program is subject to change in the future.
- 7)

3) 59C-Ai :- (Pronounced as FINANCE - Ai)

THE BELOW IS AN ILLUSTRATION AND ONE OF THE MANY IDEAS AND IS NOT SOLELY SUBJECT TO THE BELOW ONLY AND THERE WILL BE ADDITIONS, DEDUCTIONS, AMENDMENTS, ADOPTIONS OF NEW IDEAS ETC.

The ABCDeFi platform corely believes in mass participation of one and all to attain "Financial Inclusion of One and All" as well as "Financial Excellence". A Systematic Approach to this is to go to the very grass root level and start "Including people" and "learn finance" from the scratch, a learning of finance optimization, planning, assessment and so on, everything that achieves "Financial Literacy" of one & all.

This vision became the genesis and motivating factor behind the "59C-Ai" (Pronounced as Finance - Ai), an evolutionary Finance Artificial

Absolute Blend of Centralized and Decentralized Finance Finance Redefined..

Intelligence BOT capable of learning through Artificial Intelligence, Machine Learning, Deep Learning, Swarm Intelligence Learning and many other methods where its "TEACHERS": The People of the World, having taken the 1st step towards "World Finance Inclusion", mass participate and "TEACH" the BOT "FINANCE" in an innovative, highly effective and revolutionary way. The "TEACHERS" having taught "THE SOLUTION": The Most Accepted, Optimized & Effective solution, the ones always inclined from the start till the end to the end result, are awarded 60% of the "AWARD ABCD Tokens" allotted for the award and the ones shifting to the end result are awarded 40% of the "AWARD ABCD Tokens", which are equally distributed among members of the respective groups.

59C-Ai Bot

Artificial Intelligence

Machine Learning

Deep Learning

Swarm Intelligence

Surveys & Reviews Choosing & Opting

Once "THE SOLUTION" is attained, the question along with the answer automatically becomes an NFT with all the data, stats, details, outcomes, inferences, characteristic, patterns, behaviours, in depth details of each and every participant, like age, sex, citizenship, location, behaviour etc included in this NFT. This NFT is now sold on the NFT marketplace of the Platform to anyone who requires this data.

The Solutions learnt by the 59C-Ai will be put to use in many effective ways inside and outside the platform, by one and all, to attain "FINANCIAL EXCELLENCE".

NOTE : 1) The platform's Lending, Borrowing and other Financial Services are not solely dependent on the above learning but always evolving taking into consideration all the factors widely spread.

2) The above is just a basic idea of how it is intended to perform and operate!! There are going to be changes, upgrades, additions, new methods etc taken up time and again. Likewise there are methods like polls, reviews, choosing, opting etc and many more methods which shall be put to use. Thus the above is just an illustration of the performance and not the sole or the final idea.

4) THE ABCDeFi UNIVERSITY OF CENTRALIZED DECENTRALIZED FINANCE EDUCATION (AU) :-

The AU is a very unique, informal, highly informative, online, seminars oriented knowledge gaining university for educating on and all about Decentralized Finance and its applications to not only attain "Financial Inclusion" & "Financial Efficiency" but also to achieve "Financial Awareness" and most importantly "World Financial Literacy" through education of one and all.

A surrealist illustration of a computer terminal. The terminal's screen and keyboard area are integrated with a car seat and a car wheel. Several people are sitting on the car seat, which is positioned on top of the computer terminal. The background is a plain, light-colored wall.

famous jewelry and also artifacts etc NFTs. Loan after loan, the value of the unique good NFT value keeps increasing by way of principal + interest value.

b) Also to be a platform for bartering NFTs in general for other NFTs or Services with a small service fee.

6)

GYFT :- GIVE YIELDABLE FISCAL TREAT

Worldwide it is seen that gifting is a huge phenomenon where gifts are given on special occasions like birthdays, festivals, upon achieving milestones, a gesture of love/affection etc and gifts could be anything ranging from toys, useful items, edible items, clothes, valuables, collectibles etc. Many times it is seen that the gifts, as goods/items, are not needed by the receiver, not of the receiver's choice/taste/style/liking, many a times un-useful, unutilized, many a times perishable, many a times not good to be over gifted and even many more times just used once or a couple of times and then just put aside, all of which could all mean a wastage of money. It is seen that if the gift worth's money is put to use, make it yieldable, this could really go a long way in helping one and all to cater to and fulfill their needs, emergency requirements and likewise. As gifts are an embedded feature in every culture, region, religion, nation etc., every human can build his/her "Financial Holding" right from nothing and accumulate the gifts worth's money (and also earn out of it) and put it to wise, effective and calculated use.

the gift that one wants to gift and send a digital picture of it along with the money it is worth to the person to be gifted. While the person receiving will virtually have the gift and its money worth, he/she would not only accumulate the gifts worth's money and improve his/her "Financial Holding" and Financial Worth, but also earn a 3% per annum yield on it. Additionally, both the gifter and the gifted each receive an NFT of the gift digital picture which would be 1% value of the gift and which could be further traded, gifted, pledged etc.

GYFT-ing can be either in FIAT/CRYPTO/DIGITAL ASSETS or in the ABCD TOKENS.

ABCD efi TOKEN ALLOCATION

Total No. of Tokens :-

1,000,000,000,000,000 (1 Quadrillion)

- 3) The fund allocation may change in the future as per the requirements from time to time.

BONUS STRUCTURE

The ABCDEFI BONUS is a very important and integral part of the ABCDEFI ideology. The aim of ABCDEFI is to achieve effective and efficient financial inclusion, Education, Awareness, Literacy, Involvement, Professionalism and excellence of one and all of the world through Democratized Decentralization and Preemptive Centralization. Thus we would like to welcome one and all entering the platform for the ICO with the following Bonus Structure:-

- 3,000 free Tokens for every 10,000,000 coins purchased by every individual.
- Additional 1,000 free coins for Individuals Aged between 18-24 yrs.
- Additional 1,000 free coins if bought by a woman.
- Additional 1,000 free coins if from low-income or developing economies.
- Additional 1,000 free coins if having a good credit report.
- Additional 1,000 free coins for the person referring each "Successful Referral" i.e. if the person being referred successfully purchases coins in the ICO.
- Additional 1,000 free coins for professionals of Financial Institutions.

The Bonus Structure is only for and during the ICO.

For example a woman from a low-income economy working in a bank, aged between 18-24 yrs purchases 50,000,000 coins, she gets a bonus of "5 x (3,000 free tokens for every

10,000,000 tokens purchased) + (1,000 free tokens for being aged between 18-24 yrs) + (1,000 free tokens because the tokens are purchased by a woman) + (1,000 free tokens as the purchaser is from a low income economy) + (1,000 free tokens as the person works in a financial institution) = (5 x 3,000) + (1,000) + (1,000) + (1,000) + (1,000) = 19,000 Free ABCD Tokens achieved.

For claiming the above bonus, to scan and put up the valid a) the national identity card mentioning the name, gender, age (or date of birth), nationality and address. b) Work Place identity card. If the above scanned and uploaded documents are not authentic, there could be a chance of the wallet to be frozen and all the tokens bought could be taken back.

One person can claim the bonus only once. Thus buying tokens in many multiples of 10,000,000 in the first buying itself gives them high bonus.

For all of the above, the bonus will be given only for tokens bought in multiples of 10,000,000. For example, If someone buys 99,999,999 tokens then they are entitled for a bonus only on 90,000,000 tokens as the max fulfilled multiple of 10,000,000 in the 99,999,999 is the number 90,000,000.

The total number of tokens allocated as bonus are 1.5% of the entire available tokens, which is :- 1.5% of 1,000,000,000,000,000 = 15,000,000,000,000 Tokens (15 Trillion). So the above Bonus program is available only till the Tokens allotted as Bonus last, that is 15 Trillion Tokens. Once these Tokens are over, or if the ICO is completed, whichever is earliest, this program offer will cease to exist.

The unclaimed or leftover tokens allocated for Bonus are automatically transferred to the Reserve.

PROMOTIONS :-

Promotions for the ICO Stage,
A person is awarded 0.05% of coins purchased
by the one referred.

(These coins are awarded by the platform from
the promotion allocation. The purchaser does
not award these coins from his coins
purchased).

Example :
A refers B.
B Buys 10,000,000 coins
then
A receives a promotion award of 5000 coins
from ABCDeFi from its promotion allocation.
